Abstract

Rhizome samples of *Curcuma longa* L. collected from Changa Manga forest were analyzed for the presence of mycoflora. *Fusarium nivale* (Fr.) Ces., Rabenh., *F. solani* (Martius) Sacc. and *Doratomyces stemonitis* (Persoon: Fries) Morton & G. Smith were recorded for the first time on *C. longa* in Pakistan.

Key words: *Curcuma longa*, Rhizome, *Fusarium solani*, *F. nivale* and *Doratomyces stemonitis*
