The Diffusion of Islam in the Eastern Frontier of South Asia: A Fresh Approach *

Mohammad Yusuf Siddiq **

Abstract: A hinterland in the old world of Islam, the early history of diffusion of Islamic civilization in Bengal is shrouded with mystery. Though the maritime and trade contacts between Arab world and Bengal can be traced during the early period of Islam, the religious and cultural interaction between these two far-fetched lands started growing only after the Muslim conquest of the region in the early 13th century. After the establishment of Muslim rule in the region, the mass conversion to Islam took place over centuries in different forms and phases. In my present research work, I have been able to make a major breakthrough in constructing history of early religious and cultural contact between the Arab world and Bengal using the substantively rich and hitherto untapped archaeological materials, namely epigraphic sources (i.e., Arabic inscriptions), scattered abundantly all over the region. A well-known French colonial administrator in North Africa once compared the world of Islam to a resonant box: the faintest sound in one corner reverberates through the whole. As elsewhere in the Arab-Islamic world, this apt metaphor finds expression also in the Bengal frontier. In spite of their many distinctive local cultural features, one soon discovers the most vibrant message among the Muslims of Bengal - the unity within the diversity - that is prevalent everywhere in the Arab-Islamic civilization.

The land

The fruit grows from the tree,  
And the tree again from the fruit....

The egg comes from the bird,  
And the bird again from the egg.

‘All is one’ - is the essence of truth....

Sharī’a and Ma’rifat are essentially one.  

(Ali Raja, Agam folio 24-25)

The lines that appear above are typical of the Bengali mystical verses found in a genre of early Muslim Bengali literature known as *puthi*, which was popular among the rural masses until the late nineteenth century. Like this folk poetry, the early account of the spread of Islam in Bengal is still shrouded in myth and mystery due to the intricate nature of its history, complexities of its social evolution and the diversities of its religious traditions and popular beliefs.

The name Bengal in its English form Bangala or Bangal, in Arabic and Persian and Bangla or Bangladesh (as a historical term), in its Bengali version -- refers to the territory roughly situated between 27° and 21° latitude and 92.50° and 87° longitude (see map 1). The eastern parts of the present Dhaka
district, the districts of Comilla and Sylhet (Habanaq according to Ibn Battuta, Suknt in other Islamic sources and Xrihatta in Sanskrit) in Bangladesh and the state of Tripura in India were known in ancient times as Samatata. The northwest part of Bengal, to the west of the river Atrai up to the Ganges, is relatively high land. It was known as Gowda (popularly Gaur or Gauḍa, at times referring to the metropolitan area of the region) in the early days, and later on as Barind in Persian writings (according to an early Muslim historian, Mawlana Minhaj al-Din ‘Uthman Siraj al-Din’) or Varendra Bhumi in local Sanskrit and Bengali writings. This was where the Muslim conquerors first settled; they used Lakhnauti (according to Islamic sources; Laksmanavati in Sanskrit and Bengali) and the neighboring cities of Gaur, Devikot, and later on Pandua and Ekdala as their capital. The section lying to the west of the Hugli-Bhagirathi river bore the name of Radha or Radh (according to the Tabaqat-i-Nasiri of Mawlana Minhaj Siraj al-Din). The northern part of Radha often served as an entry point for the early Muslim forces coming overland from the north. The famous ancient port city of Tamralipti lay at the southern tip of Radha.

Southern Bengal (namely, Sundarban and Khulna in Bangladesh and Twenty Four Parganas in West Bengal, India) was usually known as Banga (Vaṅga in Sanskrit), and the coastal land as Harikela (e.g., the Chittagong area in the early period as well as Sylhet in the later period). Muslim geographers called it Harkand from which comes Bahr al-Harkand, the early Arabic name for the Bay of Bengal. From the early eight to late tenth centuries, Harikela was an independent state contiguous with Samatata and Vaṅga (which included Chandradvipa). The ancient Harikela kingdom once extended to Sundarban. A thick forest on the coastal region of the Gangetic delta (at present mainly in the southernmost part of the present division of Khulna in Bangladesh and in the district of Twenty Four Parganas [Chhabbish Pargana in Bengali] in the Indian state of West Bengal), Sundarban once extended much deeper into the mainland. It bears traces of early human settlement. Indigenous non-Aryan nomad tribes roamed in this region and gradually came under the influence of Hinduism and Buddhism (through rulers such as Dummanpal around the twelfth century), and finally Islam. In the east of Harikela, a Hindu kingdom -- Chandradvipa (Deva dynasty) -- emerged in the thirteenth century, which was gradually absorbed in the Mughal empire in the early seventeenth century.

The earliest Islamic sources from before the conquest of Bengal do not refer to this land by the name of Vaṅga or Bangala; they call it the kingdom of Ruhmi, probably a reference to Suhma, an ancient name of the western region of Bengal (see map no.1). There is considerable confusion about its location and its name appeared as Ruhmi, Rahma, and Dahum. Of these,
the closest to Bengali is Dharma (a spelling used by Sulayman al-Tajir\textsuperscript{10}), a possible reference to a famous Bengali king Dharmapāla (769-801). Sulayman al-Tajir also noticed correctly Dharmapāla’s non-aristocrat i.e., humble origin. According to Ibn Khurraḍa Ḍhibih,\textsuperscript{11} Ruhmi was a vast kingdom which probably included in its frontiers the Kanja (Ganges) river and Abbina, was bordered by Kamrun (Kamrup) not far from Tibet and China, and was bountifully supplied with elephants, buffalo and Indian aloe wood. Its coast, according to Hudud al-‘Alam,\textsuperscript{12} included areas such as Nimyas, Samandar, Andras, Urshin (Orissa) and Harkand (ancient Harikela near Chandradvipain South Bengal). The port of Samandar which was presumably located somewhere in the Chittagong coast from Karnafuli estuary to the Choto Pheni estuary\textsuperscript{13} (or perhaps near the present port of Chandpur at the mouth of Meghna river), is mentioned by al-Idrisi, who also refers to a river “Musla,” perhaps the Meghna.\textsuperscript{14}

The kingdom of Ruhmi, according to most of these early sources, fought constantly with its neighbours, Ballahara (Raja Ballahraya of the Rastrakuta dynasty of the Deccan) and Jurz (Gurjaras of Kanauj). It was particularly famous for its fine cotton cloth, known in the West as muslin. In addition to gold coins, cowrie-shells were used for currency. Trade with the Arabs flourished in the port cities in the south, especially in Shati’-jam (Chittagong) and Samandar. The recent discovery of two Abbasid coins in Bangladesh, one from Paharpur dated 172/788 from the time of Harun al-Rashid (170-193/786-809) and the other from Mainamati minted during the reign of Abu Ahmad ‘Abd-Allah al-Muntasir billah (247-248/861-862), attests to this early Arab - Bengal trade link which undoubtedly speeded up the consolidation of Islam in the region.\textsuperscript{15}
Plate: Folios of the manuscript *Tabaqat-i-Nasiri*, the earliest source on Muslim conquest of Bengal, mentioning Nawdia, conversion of a Mech chief to Islam, and cooperation of Mech and Kuch tribes with Bakhtiyar.\(^{16}\)
The name Vaṅga or Vangala-dexa is quite old. We find it during the reign of Govinda Chandra (sometime between 1021 to 1023 AD) in the Tirumalai Sanskrit inscription of the Rajendra-Cola dynasty. It also appears in a few other Sanskrit inscriptions of the Chandra dynasty discovered in Mainamati, Bangladesh. The historian Minhaj Siraj al-Din was perhaps the first Muslim writer to refer to the name Bilad-i-Bang. Besides Banga, he also mentions a few other regions (or perhaps sub-regions) in this eastern part of South Asia, namely, Bihar, Bilad Lakhnawi (Gauda Dexas), Diyar Suknat (most likely the Samatata region comprising the present Sylhet district), and Kamrud (Kamrup). Shahr-i-Nawdia (mistakenly transliterated as Nadia, but unlikely to be the same as the present district of Nadia), the capital of Laksmanasena (RAY Lakhmaniyah according to Minha j) was probably located on the bank of the old channel of the river Jahnabi or Bhagirathi which changed its course later on westward. It may be identified either with the present village of Nawdah on the western bank of the currently dried river Pagla slightly westward of Mahdipur village, or with the village of Nawdapara, an archaeological site near Rohanpur railway station in Chapai Nawabganj district, both not far from the city of Gaur. This assumption is further supported by epigraphic evidences, as a number of inscriptions of the early Muslim rulers (including the bridge inscription from Sultanganj from the reign of Sultan ‘Ala ‘Din ‘Ali Mardan Khalji in circa 1210 -- 13 [ins. no. 1] and the masjid-madrasah inscription from Naohata from the reign of Balka Khan Khalji in circa 1229 --31[ins. no. 3]) have been discovered in the areas not far from Gaur, but not a single Islamic inscription has thus far been found in the Nadia district.

With the consolidation of Muslim rule in the eastern and south-eastern parts of the region and more particularly with the emergence of a new Muslim capital of Sonarga’ on in the area known as Bangal, the name Bangala gradually became more popular. Sultan Ilyas Shah (740-759/1339-1358), for instance, used the title Shaha-i-Bangaliyan. Many early fifteenth century Arab historians, such as al-Fasi and al-Shibi, used this name extensively. Thus we find that throughout medieval Muslim period, Bangala (sometimes referred as Diyar-e-Bangalah as well) was the widely accepted name for the region. It appears as Suba-i-Bangala (the province of Bengal) in a Sherpur inscription dated 1042/1632 (ins. no. 274), a Churihatta inscription dated 1060/1650 (ins. no. 307), and in a number of other inscriptions after that. The famous Arab Captain Ahmad ibn Ma jid (b. 1440) often refers to “Bangala” and “the land of Bang” in his book al-Fawa’id fi Usul ‘ilm al-Bahr wa ‘l-Qawa‘id [A Treatise in Oceanography] compiled in 895/1490. These names are also used by Sulayman ibn Ahmad ibn Sulayman al-Mahri, an early-sixteenth-century Omani sea captain, who provides us with amazingly rich details about the Bay
of Bengal and its coast in his books (e.g., *The Tale of Fabulous Seas*, and *A Manual of Seas*). Hence “Bengal” in historical sense (and particularly in this book) encompasses mainly the areas now known as Bangladesh and West Bengal. Occasionally the term may be extended to cover loosely certain adjoining areas of the neighbouring regions such as Arakan (in present Myanmar [formerly Burma]) and Tripura, Assam, Bihar and Orissa (in present India). Through a long historical process, these areas altogether have formulated a distinctive regional cultural identity within the greater Indo-Muslim cultural sphere that can aptly be called Muslim Bengali culture.

**The Advent of Islam and the Bengal Hinterland**

Bengal, once an outpost of the Islamic world, today has the largest Muslim population in South Asia. Linguistically, Bengali Muslims (approximately 150 million in Bangladesh and 40 million in West Bengal, Assam, Tripura and other regions of South Asia and in certain parts of Arakan in Burma) form the second largest linguistic as well as ethnic group in the Islamic world after the Arabs, if not first. Islam is not only the faith of the majority of the approximately two hundred and forty million Bengali-speaking people inhabiting the eastern part of South Asia, but it is also their predominant and primary culture. Although geographically distant from Makkah and Madinah, the heartland of Islam, Bengal has none the less played an important role in shaping the history of the Islamic East.

There has been much speculation about the factors that led to the spread of Islam in this region and several intriguing questions remain unanswered. One is why this particular region attained such an overwhelmingly Muslim majority, while many other regions in the central, western and southern or even eastern parts of the Subcontinent did not, though they remained under Muslim rule for a considerable period. There are a number of theories about the consolidation of Islam in Bengal. They can be described mainly as: (1) mass immigration of Muslims into the area; (2) massive conversion of lower-caste Hindus to escape the caste system rigorously imposed by the upper class Hindus; (3) dominance of Islam as the religion of the ruling class and eagerness of the indigenous population to associate themselves with the ruling class; and (4) acceptance of Islam as a more appropriate way of life in the changed circumstances in the rural settings; i.e., from a tribal nomadic system to a settled farming system (e.g., Eaton’s theory about emergence of Islam as the religion of axe and plough in the Bengal delta). It appears that though a large segment of the population in Bengal embraced Islam in a formal sense at various times and for various reasons, consciousness of their Islamic identity and the degree of the intensity
of their faith and religious adherence grew gradually over a long period, a process that continues to this day. A sizable part of the farming population gradually adopted Islam for practical reason as if it suited their agrarian life more than other existing faiths in the region. On the other hand, it seems that Islam did not gain much popularity among certain indigenous castes traditionally engaged in specific professions such as Dom (mainly engaged in bamboo handicrafts and various menial jobs), Chamar (leather related works, shoemakers), Napit (barbers), Methor (toilet cleaners), kamar (blacksmiths) and kumar (pottery manufacturers) etc.

Bengal experienced great prosperity during the rule of the independent Muslim sultans, whose far-reaching welfare works, such as siqaya (water tanks and wells particularly mentioned in quite a few Husayn Shahi inscriptions), helped spread Islam to the furthest corners of the region. Institutions, such as waqf and madad-i-ma'ash (endowment and land-grants to support masjid, madrasas and khanqahs mentioned in a number of inscriptions), benefited the commoners greatly, regardless of their religion. Islam thus appeared in Bengal as the religion of commoners. Bengal's wonderful ecological balance and natural harmony left a strong imprint on its popular literature, art, architecture, culture and folklore during the Sultanate and Mughal periods. Islam finally emerged as the faith, as well as the primary culture, of the majority of the population of Bengal. During the Mughal period too, Bengal witnessed sustained growth in the positive utilization of its natural resources without losing its ecological balance and came to be considered the granary of the empire.

There are a number of other issues pertaining to the formation of early Muslim society which remain unresolved. One central question is what was the relationship between the conquering Muslim forces -- who must have been exclusively male -- and the indigenous population? Minhaj Siraj al-Din, author of Tabaqat-i-Nasiri, reports that, when Ikhtiyar al-Din Muhammad Bakhtiyar returned to the capital Devikot in northern Bengal after his defeat in Tibet, in which almost all of his soldiers perished, the wives and the children of those who perished (predominantly Khalji soldiers) started to wail in the streets, rooftops and corners loudly. The situation was so embarrassing for Bakhtiyar that he could not appear in public after that and he soon died broken-hearted. Does this statement imply that the Muslim army had settled down in this newly conquered land and married into the local population immediately after their arrival? While one cannot rule out the possibility that a limited number of families, particularly spouses, accompanied occasionally the Muslim army to Bengal, it certainly did not happen on mass scale for practical reasons. Female names in epigraphic texts, such as Boa Malati (dated 941/1534-35), and other social and historical evidences strongly
suggest that large-scale inter-marriage between the newly settled Muslim male soldiers and the females from the local population occurred at large at different stages throughout the history.

Epigraphic evidence does not give a clear picture of all these different historical settings nor does it provide complete answers to numerous questions regarding the spread of Islam in Bengal. Still, they offer many clues. The number of Islamic inscriptions during the Sultanate and early Mughal periods (1204-1707) is fairly large (approximately four hundred), indicating the gradual spread of Islamic culture into the different spheres of Bengali life.

**Merchants and the Faith: Early Islamic Contacts with Bengal**

Merchants played a vital role in disseminating religion and culture in the Old World. This is especially true of Islam, as Muslim merchants carried the message of Islam to different corners of Asia and Africa both through overland and maritime trades. In the absence of any organized institution of professional missionaries, trade and commerce played a key role in conversion to Islam. However, the historical experiences as well as the process of this transformation were different in nature when compared with the aggressive proselytization of Western Christian missionary institutions. While the missionary activities were viewed by many traditional societies in the East as one of the tools of colonial expansionism, Islam entered in these regions in most cases as civilization making ideology and finally emerged as a primary regional culture.

Though commercial activities played an important role in disseminating Islamic cultural and ideological influences in different regions; still expansion of Islam cannot be reduced to commerce, nor commerce (in the Indian Ocean, for instance) can be reduced to mere Muslim mercantile activities. Factors leading to the diffusion of Islam varied from one region to other. While the Islamic trade and maritime activities in Southeast Asia and Far East Asia played a key role in the Islamization process in a significant part of the region (e.g., Indonesia and Malaysia), it played a comparatively lesser role in Bengal.

In the first, introductory phase of Islam in Bengal, Islamic contacts came from different directions, but mainly via the northern and north-western land route and the southern sea route of the Bay of Bengal (see map 1) through trade and commerce. Thus, the conquest by Muhammad Bakhtiya r was not the first contact with Muslims in the region. Bengal had already come into some kind of limited contact with Muslim traders, merchants, sailors, and sufis at a much earlier stage. Minhaj Siraj al-Din, author of *Tabaqat-i-Nasiri*, mentions that, when Bakhtiyar appeared before the gates of Nawdia,
the capital of the Sena dynasty of Bengal, with only eighteen horsemen, the people guarding the gates of the city mistook them for a party of Muslim horse traders and opened the gates. This certainly suggests that Muslim horse traders were a familiar sight in Bengal before the conquest.

Indian sources also refer to early Muslim contacts with Bengal. A Sanskrit inscription of Ratnapala (3rd-4th/9th-10th century) mentions “Tajikas” apparently a reference to the Tajiks of Central Asia. The Chinese form of the word, Ta-shih, was also used by Chinese sources to refer to Muslims, and the word seems to have been used with the same meaning in this Indian inscription. In a Sanskrit inscription dated 1206 found near the city of Gauhati in Assam, the name Turaxka (people of Turkic origin) is used for the Muslim forces in the area.

It was the coastal areas of the Bay of Bengal where the Muslim traders, saints and sufis came first and introduced Islam much before the Muslim conquest in the north. The possibility of some early Muslim settlement especially in its south-eastern coastal region may not be ruled out as Muslim traders had extensive maritime activities in the Bay of Bengal. A number of medieval Muslim maritime accounts provide detailed descriptions of Bahr al-Harkand (the Bay of Bengal), its tides, waves and currents, wind directions, islands, and many other navigational details.

Shipwrecks and other calamities in the Bay of Bengal no doubt led to Muslim voyagers, particularly the Arab seafarers, gradually settling there. Place names, such as Jahaj Bhangar Ghat (meaning the landing stage after shipwreck), in Chittagong coastal areas bear the relics of such incidents in the past. An old Arakanese chronicle, first noticed in the mid-nineteenth century, reports a few Arabs in a village on the coast of Arakan, not far from Chittagong. According to another Arakanese chronicle, about a century and a half later, King Tsu-la-Taing Tsan-da-ya (340-346/951-957) defeated one Thu-ra-tan (Arabic sultan) and erected a victory memorial at Tset-ta-going (Chittagong). Evidently, the “Thu-ra-tan” was a person to be reckoned with and had for some reason or other aroused the jealousy of, or posed a threat to, the Arakanese king, but he is not mentioned in any other source. On the basis of the Arakanese chronicle, the historian Enamul Haq concluded that the Muslim settlers in the Chittagong region gradually grew into a compact and influential community, and eventually organized an independent principality comprising the coastal Chittagong and Noakhali districts. The ruler of this Muslim principality bore the title sultan.

Chittagong was visited by Ibn Battuta during the reign of Fakhr al-Dīn Mubarak Shah (739-50/1338-49), who described it as a port near the mouth of the Ganges, as do the Chinese accounts of the fifteenth century, and Abu ‘l-Fadl, the courtier-historian of Akbar’s reign. It may therefore be assumed that
Muslim merchants who went there referred to it in Arabic as *Shati’ al-Ganga* (the bank of the Ganges) or later *Shati-Jam* (e.g., Sulayman ibn Ahmad ibn Sulayman, ‘*Umdat al-Bihar*). The expression gradually assumed the local form (of Bengali dialect) Sadkawan, Chitagang or Chatgaon. Through Ibn Battuta, we also know that the sea trade was never limited to Chittagong; rather, traders penetrated through inland waterways deep into the mainland.

There is an admixture of Arabic words, idioms, and phrases in the local dialects of the Chittagong and Noakhali districts, a result of the close contacts between Arabs and the local population through the ages. While contacts with Muslims in other parts of Bengal were overland and mainly Turko-Persian, the coastal areas were influenced more by Arab contacts. The first Muslim conquest of Chittagong did not occur until the fourteenth century, in the time of Fakhr al-Din Mubarak Shah of Sunarga’on (Dhaka), and effective control of the area was not achieved until the early sixteenth century. When the Portuguese merchant Barbosa visited the locality about 924/1518, he found the port, which he describes as the prosperous city of “Bengala” (see map 1), inhabited mainly by rich Muslim merchants from Arabia, Persia and Abyssinia. They owned large ships and exported fine cotton cloth, sugar, and other valuable commodities to such places as Coromondal, Malabar, Cambay, Pegu, Tennasserin, Sumatra, Malacca and Ceylon. Naturally, the growth of such a prosperous Muslim community must have taken time. Early Islamic maritime literature provides us with valuable information about Bahr Shalahat (the Strait of Malacca) and the neighbouring islands such as Jazira al-Ramn—or Jazira al-Rami, which was most likely the city of Lamuri on Sumatra). Jazirat al-Rami may also refer to the kingdom of Rame, which is mentioned by the English traveler Ralph Fitch, who visited Bengal in 1585-86. Its capital was Ramu, which still exists not far from the town of Cox’s Bazar, but it is now a small and declining town.

After Islam was introduced in the coastal area of Bengal, it spread into neighbouring Arakan. In the map of Belves, the area to the south of the river Karnafuli -- consisting of the southern Chittagong district and the district of Chittagong Hill Tracts -- is designated as “Codovascam,” the name the Portuguese gave to the locality, after Khuda Bakhsh Khan, an administrator of the area who established himself as its ruler toward the end of the Husayn Shahi period. The Magh rajahs of Arakan often caused much hardship to the Muslim inhabitants as well as to the rulers of Bengal, especially during the early Mughal period. The constant encounter of the Arakanese with the Muslims in Bengal, however, eventually resulted in the strong impact of Islam on their culture. In the long run, Arakan itself became, and still remains, predominantly Muslim. Thus, the first phase of Islamic contact, predominantly Arab, paved the way for the consolidation of Islam in
Bengal and its neighbouring areas. It was, however, limited in nature, as it failed to establish the Arab Shafi‘i culture that commonly prevailed along the coastal belt in the Indian Ocean perhaps due to its very liberal attitude in day to day matter (for example no restriction on any kind of seafood). In spite of the continuous European onslaught on Arab maritime activities in the Indian ocean that began in the early sixteenth century, Arab ships continued to sail from different ports to Bay of Bengal, particularly from Oman, trading mostly in the fine Bengali cotton fabric of Muslin until eighteenth century.

During the sultanate period, particularly after the coming into power of a Bengali Muslim sultan Jalal al-Dīn Muhammad Shah (r. 818-836/1414-1433) from the house of Ganesh, economic integration of Bengal with the wider world of Islam provided the region with economic growth. Its market became open to Indian ocean trade and Bengali agriculture and industrial products found an outlet for maritime export. Thus, Bengal, as well as all of South Asia, became an integral part of the Islamic civilization that dominated the contemporary Old World until the advent of Western colonial powers in the region. After the Mughal emperor Akbar’s conquest of the entire region and the establishment of state administration at the grass-root level even in the low, marshy land of the southern delta, Bengal was integrated further into the world trade and commerce system. Islam, as Eaton sees, entered in this delta as a civilization-building ideology.32

**The Muslim Conquest of Bengal and the Beginning of Islamic Consolidation**

Like most of the other regions in the Islamic world, the history of Islam in Bengal begins not with defeat, but with victory; not with fall, but with rise. The pivotal message of the early Islamic inscriptions is of God’s help in the total victory, not God as a source of testing (See, for instance, Chehil Gha zi Masjid Inscription [no. 56] in Dinajpur, dated 865/1460; ins. no. 56). The first Islamic inscription from the reign of Sultan ‘Ala’ Dīn ‘Al-Mardan asserts that Islam grows every moment due to the effort of the ruler. Even the popular titles of the Muslim rulers of the Bengali sultanate, such as Abu ‘l-Muaffar (victorious), convey the same message.

It was on 19 Ramadan 601 (10 May, 1205)33 that Ikhtiyar al-Dīn Muhammad Bakhtiyar, an adventurer from the Turkish Khaljī tribe of mountainous central Afghanistan (known as Khalijistan), defeated Lakhmīna Sena, a Hindu king of the powerful Sena dynasty of Bengal, with just a handful of soldiers and swept over almost the whole terrain of Raṣa and Barindra in an amazingly short time. This sudden Muslim victory was very surprising since Lakhmīna Sena was considered a powerful king of eastern India who had previously conquered many neighbouring areas and towns.
such as Kalinga, Kamarupa, Puri (Purushattam-Khsetra in ancient days) and Prayaga. He was, in fact, quite appreciated by a contemporary Muslim historian, Minhaj Siraj al-Din, who wrote in detail about the early Muslim campaigns in Bengal. Through this military victory, a strong Muslim foothold was established in the eastern part of South Asia which was soon to change the social, cultural, political and demographic makeup of the region. It seemed to be a military victory achieved through superior tactics and the swift mobility of the Muslim cavalry, as depicted in some of the earliest beautifully minted commemorative gold and silver coins of Bakhtiyar and Sultan ‘Ala’ Din ‘Ali Mardan Khalji both at Gaur and Delhi. Marshal sports, such horse riding, was never a part of popular culture of Bengal, nor did cavalry ever play any meaningful role in the defensive line of Bengal army. Another underlying factor contributing to this victory was the failure of the Sena dynasty to gain popular support, especially from the semi-Hinduized indigenous Buddhist population of Bengal, who had not accepted the rule of the Hindu Sena dynasty wholeheartedly. Bengal had a rich tradition of Buddhism before the Sena rule. In addition to the Buddhist Pala dynasty, some of the early Hindu kings were also influenced by it. On a Ramapala Sanskrit copperplate, for instance, we find that a Hindu king Suvarna Chandra is described as a follower of Buddha.

Unlike their predecessors -- the Buddhist Pala dynasty of Bengal, who were original inhabitants of Bengal -- the Senas were Brahman Kshatriya (one of the highest Hindu castes) and worshipers of Shiva and Shakti. They came probably as fortune seekers from Karnat in South India, a region far away from Bengal. Shortly after their arrival, they were able to establish a fief in Barindra, in northern Bengal. As the Pala dynasty weakened, the Senas began to emerge as the only powerful rulers of Bengal. Their adherence to the caste system kept them from establishing roots among the local population. The Vedic religion, which the Aryans brought with them, never took strong root in the local people of this region. This might have been one of the factors that led a good portion of the indigenous Mlechcha (a Sanskrit term essentially connoting non-Aryan natives/ uncivilized non-Hindu aborigines of India) population (such as the Mech tribe in the north, according to Tabaqat-i-Nasiri) to cooperate with the Muslim conquerors identified by the Aryan (Vedic) Hindus as Yavana (originally Sanskrit word meaning polluted outsiders/aliens). As a counter balance to the previous ruling class of the Senas, Bakhtiyar tried to woo some non-Aryan indigenous tribes in the region successfully to the extent of building a huge monastery for the Buddhist population of the area. Thus, we notice that the assimilation of the indigenous people with the new immigrant Muslims from Afghanistan and Central Asia started at the very dawn of the Muslim conquest. No wonder if
this factor played a key role when Bakhtiyar moved his seat of rule to the further north in Devikot, inhabited mainly by the local tribes to this day rather than preferring Lakhnot or Nawdah (the present Mahdipur village and its adjacent areas), at the heart of the Lakhnawi(Gaur) region.

The earliest recorded conversion to Islam took place among the indigenous tribe of Mech (most likely an abbreviated form of the Sanskrit word Mlechchha) inhabiting the foothills of the Himalayas in the north of Bengal. The newly converted Muslim ‘Ali Mech, an influential tribal leader, played a key role in guiding Bakhtiyar Khalji during his Tibet campaign as well as ensuring a safe return passage for him after the disastrous failure of his Tibetan expedition. It seems that a large segment of the tribal population slowly converted to Islam over a long period as they gradually moved toward a settled agrarian life. Another factor contributing to the diffusion of Islam in this region was the role of religious personalities (e.g. qadis, ulama’, and sufis) and traders who interacted successfully with the Bengali peasants (see map no. 2 and 3).

The military success of Bakhtiyar Khalji in Bengal resulted in the creation of a strong Muslim presence in the eastern hinterland of the Subcontinent. It also generated a zeal for further expansion among the new ruling class. Had Bakhtiyar’s military adventure in Tibet been successful, the history of Sino-Islamic relations would have been quite different, for Tibet might have entered into the ethos of Islam. In any case, Bakhtiyar’s successors continued a policy of expansion in almost all directions, though with limited success. The early rulers, such as ‘Usam al-Din ‘Iwad Khalji and Mughith al-Din Tughril, led a number of military campaigns in eastern Bengal. In the first half of the fourteenth century, Muslim troops penetrated into Sukna (Sylhet), Kamru (Kamrup) and Assam, crossing the Brahmaputra river in the east and northeast, and to Chittagong on the Bay of Bengal in the south.

This second phase of Islam in Bengal proved to be far more dynamic than the earlier phase, which was limited mostly to commerce. The emergence of early Islamic capitals such as Lakhnawi, Gaur, Pandua, Ekdala and Tanda in the north, and later on Sonargaon and Dhaka in the east and Satgaon in the southwest, played an important role in the further consolidation of Muslim settlements in the region. Unlike Delhi, the Indian Muslim capital, Bengali Muslim capitals gradually turned into Muslim majority areas. Because of Bengal’s distance from Delhi, this easternmost region proved from the very beginning to be difficult for the central government at Delhi to control and administer. The governors in this remote province, appointed from Delhi at the earlier stages, often tended to exercise their authority like sovereign rulers, a phenomenon that led to the creation of independent political structures in the region from the very beginning.
While this new wave of contacts through land routes overshadowed the age-old sea link that was once instrumental in the diffusion of Arab-Islamic culture in the coastal areas in the south, the northern overland contact introduced a fresh element in the cultural dimension that came from Central Asia with certain blends of the old Sasanid-Persian legacy. But at the same time, Central Asian ‘Ulama’, mashayikh and sufis, particularly from Khurasan (e.g., Mu`affar Shams Balkh) played an important role in introducing Islamic literature and disseminating Islamic education in the region. Many Persian words started appearing in the daily vocabulary of the Bengali language.\textsuperscript{39} A number of the earliest Islamic inscriptions in Bengal (including the first Islamic inscription in the reign of Sultan ‘Ala’ Din Khalji [1210-1213] and the third Islamic inscription in the reign of Balka Khan Khalji [1229-1231]) were inscribed in Persian. The highly Persianized ruling elite obviously favoured Persian as the court language. Though Arabic maintained its superiority in religious discourse, as we find in a khanqah inscription dated 1221 (ins. no. 2), sufis such as Nur Qutb al-‘Alam (d. 1459?) freely used Persian for their writing, such as malfuṣ (mystical tracts) and maktūba t (letters). One also notices the spread of a few rawdas (shrines associated with the veneration of saints) in this early period.\textsuperscript{40}

**The Emergence of the Independent Sultanate and the Spread of Islamic Culture**

Sultan ‘Ala’ Din Khalji, the second Muslim ruler of Bengal, proclaimed himself sultan (see ins. no. 1, pl. 1) as early as 607/1210, only six years after the Muslim conquest of Bengal, as did some of the other early rulers who were offshoots of the Delhi based Balbani dynasty. During the reign of Muhammad ibn Tughluq of Delhi, Bengal came to be ruled by Fakhr al-Din Mubarak Shah at Sonargaon, ‘Ala’ al-Din ‘Ali at Lakhnawati in the northwest, and Qadr Khan probably in Satga’on. In this power struggle, it was Hajji Ilyas Shah (740-59/1339-58) who finally emerged as victorious in Satga ‘on and then in Lakhnawati. Under his able leadership, all three mini-states were merged into an independent Bengal sultanate whose territories were gradually expanded. Thus it was Ilyas Shah rulers who successfully established a real independent sultanate around the middle of the fourteenth century. Under this dynasty, Islamic art and architecture flourished, and commerce in Bengal’s textiles and agriculture rapidly increased. In the beginning of the fifteenth century, Ghiyas al-Din A’am Shah strengthened cultural links with China, Persia, and the Arab world. The port of Chittagong served as an important centre of trade with the outside world, particularly with the lands further east, and a point of embarkation for the Muslim
Many Arab voyagers, travellers, traders and religious personalities visited Bengal during this period. Among the ‘ulama’ from Makkah, who visited Bengal during this period, was Ahmad ibn Sulayman ibn Ahamd al-Taruji (a scholar and traveller from Alexandria, Egypt; d. 812/1410) who found this country very prosperous.

As with most of the other parts of the Islamic world, the relationship between the ruling class and the ‘ulama’, as well as sufi and shaykhs in Bengal during this period, could at best be called a love-hate relationship and was often mired in hidden tension, an uncomfortable state of mutual acceptance that prevails in the region to this day. ‘Ulama’ and sufi shaykhs were particularly concerned about the growing influence of the Hindu elite and bureaucracy who held high positions in state affairs. Among the sufi shaykhs, Nur Qutb al-‘Alam, who resisted the growing political influence of Raja Kansa (probably a misspelling of Sanskrit Ganesa), was the most vocal. A powerful Bengali Hindu landlord of Bhaturia in Barindra, Raja Kansa seized power around 1414 and again during 1416-17, but finally lost his bid to impose high caste Hindu Sanskrit culture in the land, as his son Jadu embraced Islam through Nur Qutb al-‘Alam. After the enthronement of Jadu, who took the name of Sulta n Jalal al-Dn Muhammad Shah (r. 1414-1433), Bengal looked to Makkah, Madinah, Damascus, Cairo and the other cultural and intellectual centres of the Arab world for its religious and cultural frame of reference rather than depending solely on the Persian sphere of influence in north India and Central Asia. Conversion of an influential local Hindu elite to Islam had a far-reaching effect as it set another important precedent for the further Islamization of upper-class Hindus in Bengal.

Thus, a third phase of the consolidation of Islam began in the region in the form of a Bengali Islamic culture. In his successful pursuit of formal recognition and nomination as amir by the Abbasid caliph in Cairo, Sultan Jalal al-Din sent his envoys to Sultan Barsbay in Egypt with royal gifts. He also sent generous endowments to Makkah and Madinah to build two madrasas there which became famous as Bengali madrasas. This renewed age-old Arab-Bengal relation helped the Bengali Islamic culture draw closer to important religious centres in Arabia. Though this Bengali Muslim dynasty did not last long (as the former Ilyas Shahi dynasty was restored in 841/1437), the religious trend could not be averted.

Bengal enjoyed great prosperity under some of these independent sultans, and its cross-cultural ties were broadened. While Chinese emissaries were received at the royal courts in Bengal, ambassadors of the Bengali sultans travelled as far as Cairo and Herat on their diplomatic missions. It maintained ties with both East and West. The restored Ilyas Shahi dynasty ruled Bengal until 893/1487, when the leader of the Habashis or the black
palace guards (originally slaves from Africa), the eunuch Sultan Shahzada, murdered the last Ilyas Shahi sultan Fath Shah and seized power. After a brief period of anarchy, order was eventually restored. But the power gradually passed over to Sayyid ‘Ala’ al-Din Husayn Shah in 898/1493 who claimed to be a descendant of a Sayyid family of Arab ancestry. This new dynasty further strengthened the Islamic traditions by building a series of mosques and other religious edifices. So far, nearly one hundred mosque inscriptions (see table of inscriptions) have been discovered from the Husayn Shahi period alone, which lasted only about forty-six years (from 1493 to 1538). The enlightened rulers of this dynasty patronized the arts, culture, and particularly Bengali literature. Some of the great epics, such as the *Mahabharata*, were translated into Bengali at this time. The public projects of many of the sultans (such as digging wells, construction of water-fountains, roads, dams, causeways and bridges as recorded in a large number of inscriptions) made a positive impact on the vast number of non-Muslim subjects and contributed to the rapid spread of Islam in the region.

Inscriptions from this period provide us many information about various aspects of life and society of the time. For example, three inscriptions of Baba Salih during the rule of Husayn Shah, now preserved in Bangladesh National Museum, Dhaka, depict what would have been perhaps considered a traditionally successful and exemplary life of a wealthy rural Muslim landowner of medieval Bengal. On the basis of what appears in the inscriptions, one can conjecture that towards the end of his life in 910 (1504), he built a mosque as an act of piety in the village of Azimnagar, in the present district of Dhaka (see the masjid inscription of Azimnagar dated 910/1504, ins. no. 151). In the following year in 911 (1505), he set for pilgrimage to Makkah. On his successful return, he assumed the title of Khadim al-Nabi Hajji al-Haramayn wa Za’ir al-Qadamayn Hajji (the servant of the Prophet -- the one who made a pilgrimage to "aramayn [the two most sacred places] and visited the two [holy] footprints -- Hajji Baba Salih) as recorded in an inscription (see the masjid inscription of Bandar dated 911/1505, ins. no. 163). An inscription in the following year (the tombstone of Hajji Baba Salih from Sonargaon dated 912/1506, ins. no. 164), with a Qur’anic verse at the beginning, records the death of Hajji Salih, the pious. Apparently, the inscription was set on his tomb intended to be a shrine (rawda) for the locality.

The Husayn Shahi dynasty finally came to an end when the Afghan chief Shahr Shah Suri took over Bengal and used it as a base from which to eject the Mughal emperor Humayun from India. From then on, Bengal's independence was thwarted. Once the Mughals were firmly re-established in
Lahore and Delhi and the Afghans defeated, Mughal influence began to be felt in Bengal. Sulayman Karrani (r. 971-980/1564-1572) -- the former governor of southern Bihar and later on, the ruler of Bengal -- acknowledged the suzerainty of Emperor Akbar.

From Syncretistic Tradition to Islamic Reassertion: The Mighty Mughals and the British Raj

After a long effort, Bengal was finally subdued by Akbar toward the end of the sixteenth century, and soon after was incorporated into the Mughal empire. Henceforth, it became one of its subas or provinces. Though its status was now reduced to a mere remote province of the mighty Mughal empire, it was still considered one of the richest regions of South Asia. Its ports were used by many pilgrims in the East to travel to Makkah and Madinah. The Mughals were able to establish a very effective administrative and revenue system in the country. Under their firm administration, the region continued witnessing economic growth.

Many new settlements took place during this period in less populated or uninhabited parts of the Bengal delta, particularly in the south, which, in a way, contributed to the consolidation of Islam in the region. There is a popular expression in Bengali about the old landscape of these marshy lowlands which says: Jale Kumir Dangai Bagh (which means: Crocodile in the water and tiger in the land). The semi-nomadic people at the edge of the Sundarban forest region in the south, locally known as Buno (forest people), depended solely on forest resources (such as hunting and honey collection). Many of them started identifying themselves with Islam as they came in touch with the Muslims. Place names in the extreme south such as Bular Ati in Satkhira (literally: seven cucumbers, a symbolic reference to seven agricultural settlements) district, refers to the process of clearing the land from a kind of dense bamboo shoots (bula in the local dialect) for settlement.

New settlements in Bengal were quite often named after the pioneers who founded those settlements, such as Mahmudpur (a pur or settlement founded by Mahmud) in Satkhira, Mulla Tero Gharia (a settlement of thirteen families under a mulla) near Kushthia city, and Baro Gharia (a settlement of twelve families) near the town of Chapai Nawabganj. The settlement process played such an important role in the region that during the colonial period, the English word “settlement” itself became an important official term in the land and revenue administration. Thus, during the time of the British Raj, settlement surveys were conducted periodically and settlement records with every meticulous detail of the area on elaborate maps were prepared. For example, one of the surveys that took place on both sides of the upper Padma river in Chapai Nawabganj, Murshidabad and Malda districts (in the vicinity
of Gaur and Pandua) was known as Diyar (meaning habitation in Arabic and Persian; Diyaṛa in local dialect) settlement where the settled population claimed to be the descendants of the Afghan soldiers during Muslim rule. Overall, Mughals were liberal in their attitude towards their subjects regardless of their religion. Not only did they promote Muslim institutions such as madrasas and masjids through endowments and land grants such as madad-i-ma‘ash, but they also occasionally supported Hindu institutions such as mandirs and temples. During this period, the Indo-Persianized syncretic tradition found a new impetus in the region. A class division in Muslim society existed in Bengal from the very beginning, as depicted in the first Islamic inscription from the reign of Sultan ‘Ala’ Din Khalji, which refers to khas (elite) and ‘am (commoners). It became more apparent during the Mughal rule as a dividing line could easily be seen now between the noble class -- the Brahmin class of the Muslim elite known as ashraf (nobles), consisting mainly of immigrant Muslims -- and the non-Brahmin class of Muslim masses, known as atraf (sometimes also known as ajla or arzal meaning people in the periphery, comparable to the term mlechcha in Hindu social classification) who formed the bulk of the indigenous Muslim population in the rural areas. With the gradual passing of power into the hands of the East India Company after the decline of Mughal rule in the second half of eighteenth century, a Hindu version of ashraf, known as bhadrolok (elite people), replaced the Muslim ashraf who had, until then, held most of the administrative and other official and semi-official posts and formed a majority of the rich and middle-class of the Muslim population. Ironically, it was during the time of the British colonial period that popular Islamic movements created a greater awareness among Muslims of their Islamic identity, and ‘ulama’ started asserting social leadership more vigorously than before. While Bengali ‘ulama’ often looked towards North Indian Islamic institutions and ‘ulama’ for their intellectual and scholarly direction, they were more successful than their counterparts elsewhere in conveying their religious message to the grass-root level in the rural areas of Bengal. The nineteenth and twentieth centuries witnessed many social, intellectual, religious and political movements in the region. For the Muslims, it was an era of self-assertion, reformation, regeneration, and perhaps reorientation also.

The nineteenth century Muslim struggle against colonial power, particularly the jihad movement, drew substantial support from the rural masses. However, it antagonized many ashrafs as well as a large portion of the traditional mullas, whose vested interests were hurt by the movement, as it rejected the age-old syncretistic tradition. Led by the ‘ulama’ of the madrasas, this movement found its frame of reference in Arabia. The
egalitarian nature of the movement necessarily resulted in class conflict between the Bengal Muslim peasantry and the elite class of both Muslim *ashraf* and Hindu *bhadrolok*. But at the same time, it strengthened the Islamic identity of the Muslim masses in the vast rural areas of Bengal, many of whom were still Muslims by name only.

The Jihad movement (sometimes branded as the Mawlawi Movement) had a profound impact as a large number of the Bengali followers of Sayyid Ahmad Shahid (1786-1831) and his disciple Sayyid Isma'il Shahid (1779-1831) travelled to many remote regions of Kashmir and the North West Frontier Province to participate in jihad. Some of these *mujahidun* (freedom fighters) went as far as Yaghistan and Chamarqand in Afghanistan, for training and safe refuge. Mawlana ʿInayat ʿAl¬ (1792-1858), the brother of Mawlana ʿWilayat Ali (1790-1852) and one of the deputies of Sayyid Ahmad Shah¬d, spent almost twelve of the last years of his life as an Islamic activist deeply engaged in *da’wa* (Islamic propagation) in various parts of Bengal. The village of Hakimpur in Jessore served as his headquarters at one point. The movement, referred to sometimes as tariqa Muhammadiya, gained popular support particularly in the western and northern districts of Bengal. Many of its followers became known later on as Ahl al-Hadith because of their strict adherence to the Qur’a n and Sunna. They are still numerous in certain parts of those areas.

The institution of the hajj provides an ideal occasion for Muslims all over the world to interact with each other. It played a key role in re-centring the Muslim world after the onslaught of the Mongols and the demise of the Baghdad caliphate. The pilgrims in the Holy Lands imbued the original teachings of the Prophet and his companions, and then returned to their homeland to serve as beacons of the “true Islam” to peoples at the edge whose Islam, in strict interpretation of *sunnah*, in their opinion, was dangerously encrusted with local custom and syncretic belief. For many, it was also a rare opportunity for exposure to different pan-Islamic and revolutionary movements such as the Wahhabi (more accurately Salafī) movement in the Arabian peninsula. Muslim activists such as Hajji Shariʿat Allah, a pioneer of the Fara’īdi movement (a symbolic reference to *fard* or fundamental religious duties and obligations), and later on, his son Dudu Miah were profoundly influenced by the movement of Shaykh Muhammad ibn ʿAbd al-Wahhab in the Arabian peninsula as well as the Jiha d movement. Titumir (Sayyid Mir Nithar ʿAli, 1782-1831), an anti-colonial Islamic activist and leader of peasant uprisings in Bengal, was another forerunner of these movements. Influenced by Sayyid Ahmad Bareilwi in Makkah while on the hajj, Titumir called for a revival of the original teaching of Islam stripped of the influence of syncretic culture and tradition. A pioneer of the Bengali egalitarian ‘ulama
'Titumir called for a kind of class struggle (misunderstood by Karl Marx, who regarded it as merely a sort of religious fanaticism) firmly based on Islamic ideology which continued in different forms and under various names to our own times, such as the political movement led by the peasant leader Mawlana Bhasani (d. 1976). While analyzing the social and religious history of this period, we also have to note a new development in society, that is, the spread of religious debates known as *bahth* or *muna ira* between the traditionalists (Sabiqi) and the reformists (known by various names linked to different movements such as the Ta‘yyuni school of Mawlana Kiramat ‘Alī [1800-1873]) which contributed indirectly to a greater religious awareness in society, for in the remote rural areas many Muslims had still not been exposed to formal Islamic teaching and were Muslims in name only. All these different elements played almost the same role as a relatively modern Islamic movement -- the Tablighi Jama‘a -- is playing today.

Until the end of the eighteenth century, lower Bengal, and more particularly its southern areas, were sparsely populated. In 1793 for instance, only 60% of Bengal was cultivated. But in 1900, Bengal became one of the most densely populated cultivated areas in South Asia with a rapid increase in its Muslim population. Until the mid nineteenth century, Bengal was, somehow, considered to be inhabited largely by low-caste Hindus -- described as “semi-amphibious aborigines of Bengal”, by H. Beverly, author of the very first census report of Bengal -- who were, according to him, “merely the hewers of wood and drawers of water for a set of masters in whose eyes they were unclean beasts and altogether abominable.” However, the census of 1872, the first of its kind in the region, produced an unexpected result. Surprising as it was to the colonial power, it was found that Muslims constituted more than one-third of the total population of Bengal, most of them farmers. This census, however, was not a perfect one, since the Muslim population did not participate in it wholeheartedly, as they were suspicious about the intentions of the British colonials in conducting it. Many of them thought that listing their names in the census report as Muslims was not free from danger since it could be used to identify them as potential participants in anti-colonial struggles such as the Jihad movement. However, the census process itself contributed indirectly in making the Muslim rural population aware of their Islamic identity. Faced with new challenges and growing pressure both from colonial rule and local Hindu land-lords, a sense of solidarity grew among the Muslims which made them realize that they were part of the *ummah* (a traditional concept about the Muslims as a single united nation) that stretched beyond any geographic boundaries. The next few censuses, especially those held in 1881, 1891 and 1901, produced more
accurate results, as the Muslims began to understand that the census process was not a plot against them. The growing cooperation of the Muslims in the census made the later census reports more accurate and reliable, and they reported a rapid growth in the Muslim population. Of these, the 1901 census produced the startling statistical development that Muslims had become the overwhelming majority of the rural population, particularly in eastern, southern and northern Bengal, an unexpected demographic change even noticed by Bengali literary laureates of the time such as Tagore and Sharat Chandra Chattopadhyay in their extremely popular novels and short stories.51

At different times, Bengal played an important role in shaping the political destiny of the Muslims in South Asia. It was in Dhaka -- the capital of the province of East Bengal and Assam in British India -- that the Muslim League was founded towards the end of 1906. Its leaders as well as the masses took part in the struggle for Pakistan. Its role as the most populous Pakistani province, and later on its secession from Pakistan to become a fully independent country, is a long and interesting story, but one beyond the scope of this study.

Royalty and Ruling Establishment
The history of Muslim rule in Bengal is full of events and developments. Bengal witnessed major changes during this period in almost every sphere of life as Islam started spreading in different corners of this region. Sources such as Riyad al-Salatin offer an opportunity to look into the inner story of the royal palaces, the public and private lives of the rulers, their interests and day to day activities, ethnic background, legal and actual positions, patronage of art and culture, religious leanings, contact with the outside world and many other facets of the ruling class. The foundation as well as the continuity of Muslim rule was not an easy process, for some of the rulers were actually born outside of the region and thus could be viewed as foreigners in the land that they ruled. Even if they were born in the region, they inherited an ancestry that originated outside most probably in Khurasan (particularly in the present region of Afghanistan) or Central Asia. The problem of legitimacy, henceforth, could undermine sometimes their claims as a rulers. Moreover, very few of them had royal ancestry in a strict sense. In fact, the very foundation of the Muslim ruling establishment of Bengal was laid by those who rose to higher ranks in the army from an ordinary and humble background (such as slaves). The difficulties, that many of them faced, were enormous; the challenges in front of them were quite often countless. Yet the Bengali Sultanate prospered from time to time, and lasted for two centuries (740-944/1339-1538). The civilization and culture that grew
up under the patronage of these sultans were not only fabulous, but were also all-embracing. They stimulated not only Muslims of different ethnic origins and background from various regions of the Islamic world and more particularly from the Persian world of Central Asia, but they also encouraged the participation of the local population, many of whom were Hindus. A very interesting aspect of the Muslim rule in Bengal is the Hindu-Muslim relation itself. The non-Muslims in general lived in harmony with the Muslims to which the ruling class belonged. Their rights were normally well-protected. Seldom was there any destruction of their temples occur in peace time.

The deeply-rooted Persian culture of the Muslim capitals influenced almost every aspect of the elite’s lives, from titles to the court language, as can be safely inferred from the first and third inscriptions of Bengal rendered in Persian. The rulers and administrators were sometimes eager to create new urban centres and cities as symbols of their authority and power. They over-guarded their interests, typical of the ruling class. A few of them were absorbed in pastimes or were obsessed with sensual pleasures. Some of them kept large harems. Many were inspired by philanthropic ideas as they carried out numerous welfare projects for the general public as well as the elite (khayr kardah dar haqq-i-khas ‘am, as expressed in Persian in the very first Islamic inscription [ins. no. 1] of Bengal). During their reign, many important educational institutions (e.g., madrasa) and hospitals (bimaristan) were established. These welfare activities played a crucial role in the diffusion of Islam.

In spite of many glories and successes, these rulers in general failed to achieve some basic developments at the national and state levels. Their reign witnessed very little progress in science, engineering, advanced scholarship, higher education and most importantly mass education. In spite of Islam’s encouragement of education for everyone, the idea of mass education was never given any serious consideration during the Muslim rule in Bengal. Hence this new civilization making process failed to earn popular participation in some very basic areas and infra-structure of mass development.

From the point of long term defence policy, very few Bengali rulers were able to create a strong naval force in this riverine deltaic region that could protect them from potential naval attacks coming from the Bay of Bengal in the south. Thus during the Mughal rule, the southern part of the region became an easy target for the Magh pirates of Arakan, the Portuguese and the other European naval powers. The lack of advancement in military technology was one of the prime reasons for their loss of power finally to the East India Company.
Commerce and Maritime Activities

Commerce and trade played an important role in the formation of an international system in the Old World. In spite of many setbacks from time to time, these traditional methods of trade continued in the Muslim world for centuries. Sayyid Mujtaba Ali, a famous Bengali writer, provides in his remarkable travelogue Deshe-Bideshe (Bengali text) a lucid eye-witness description of these thriving caravan routes in Afghanistan in the early part of the twentieth century which once connected Central Asia with many neighbouring countries including Bengal. These commercial links were the natural outcome of traditional societies based on need and supply, rather than the aggressive marketing policies through highly organized professional networks, which were yet to be introduced by the Europeans in the consecutive periods. In spite of having little or sometimes no state support from time to time from ruling establishments, these traditional trade-links and commercial activities flourished for centuries. They declined only after losing ground to their aggressive European rivals, who did not hesitate to use their far superior naval power to monopolize Asian commerce and maritime trade routes.

There are a few important sources in Arabic, Persian and Turkish as well as in South Asian languages that provide us with details about the Muslim maritime activities. For example, both the remarkable works of the early sixteenth century Omani captain Sulayman ibn Ahmad ibn Sulayman -- al-‘Umda al-Mahriryyah fi Dabt al-‘Ulum al-Bahriyyah and al-Minhaj al-Fakhir fi ‘Ilm al-Bahr al-Zakhir -- discuss in detail the maritime routes, the tides, waves, currents and the directions of winds in the Bay of Bengal and also the effective ways of using these elements in sailing. These were the secrets of the successes of Muslim sailing activities in the Indian Ocean, which were yet to be passed to European sailors before they could actually set out for Asian maritime adventures.
Mosques: The Nucleus of Islamic Society

Map 2: Diffusion of mosques in medieval Bengal

In his famous *Muqaddima*, Ibn Khaldun observed that architecture is the most powerful visual expression of *al-‘umran* (civilization). Islamic civilization attached great importance to architecture. Rulers are often tempted to treat architecture as a symbolic act for legitimacy, power and grandiosity. The mosque -- the key to Islamic architecture -- is a natural expression of Islamic society and the nucleus of the religious, spiritual, and social life of the community. As its root *sijd* (meaning prostration) indicates, *maṣjid* (mosque) is a reality where the relation between architecture and Islamic belief is clearly visible. It is here that one feels that the very form of the mosque, its minaret, minbar and different other architectural vocabularies communicate a powerful visual language of Islamic culture. The long arcade on the both sides of *sahn* (courtyard) leading finally towards the vast space of the *qibla* hall reminds its visitors about the transition of earthly life to the eternal life. The direction of every mihrab towards *qibla* (i.e., Ka’ba) symbolizes the unity of *ummah* (Muslim people) and conveys the powerful message of *tawhid* (Divine unity). The mosque has undoubtedly much stronger appeal to its community members than for instance a temple in the non-Muslim world for it attracts a large
gathering many times a day, not to mention the Friday congregation of *Jumʿa* prayer. Thus it integrates the overall life of Muslims.

One may be surprised to note that the number of mosques in Bengal as well as in many other Muslim countries still remains higher than for instance the number of primary schools. One of the underlying reasons for this kind of development is that among the multi-faceted functions of mosques in Islamic societies, until very recently they continued to serve as *maktab* or primary schools for their communities. In urban settings, sometimes we find a shopping arcade or market place added to the mosque complex, which is again symbolic of the fact that the activities of daily life are not divorced from the practice of religion. Thus, mosques are built for the continuous flow of the surrounding population towards them.

In a way, every new Islamic settlement in Bengal evolved around a congregational mosque. Construction of public places such as markets, inns, caravansaries, hospitals, fountains, wells, and ponds around the central mosque in the city centre not only created a bridge between the religious domain and public sphere, but also helped spread welfare activities on a popular level that ultimately helped spread of Islam in the region. This is particularly true in Bengal, where the construction of mosques and welfare activities of the Bengali sultans played an important role in introducing Islam to the local population. Quite a few early Islamic inscriptions refer to these public works.52

Among the Islamic inscriptions of Bengal dating from 1204 to 1707, mosque inscriptions constitute the largest (nearly three hundred in number), a phenomenon that points to the important role mosques played in the overall religious, social and cultural life (see chart no. 3, and also map no 4).53 Like elsewhere, mosques evolved as a powerful social institution and a symbol of new settlement in Bengal. At times, they served as meeting places for Muslims and the local population, both intellectually and socially, and contributed to the diffusion of Islam. We come to know through the earliest surviving Islamic literary work in Bengal, *Hawd al-Hayat*, that non-Muslims were welcomed to visit mosques, to inquire about Islam and even to debate religious issues.54 Opening the gates of masjids and *jamiʿs* to non-Muslims must have had a positive effect on the popular sentiment in a land where entrance to mandirs and temples was often restricted to upper castes in Aryan Vedic culture. In some rare cases, even wealthy and influential Hindus supported mosque construction as a part of public work.55

One fascinating aspect of natural harmony can be found in the traditional architecture of the Bengali mosque, which is seen as fitting within a natural setting rather than forcing itself on its surroundings. The monumental mosque architecture of the fabulous capitals—such as Gaur,
Pandua, Dhaka, Murshidabad and Rajmahal—gives us a different message, as this architecture represents royal patronage and majestic taste. Both the Adina mosque of Pandua (founding ins. dated 776/1374) and Shait Gumbuj masjid of Bagerhat (see ins. 49 for the tombstone of the founder of this congregational mosque dated 863/1459) are still considered among the largest mosques ever built in South Asia, nay, in the old world of Islam.

However, the overall nature of Islamic art and architecture in Bengal is not imposing; rather, it belongs to the natural background in its basic character. While royal patronage helped construct hundreds of mosques in and around the capitals and other big cities and occasionally in small towns, in the vast rural areas of the Bengal, simple forms of vernacular mosques are used for daily prayers that draw their architectural vocabularies from local traditions and natural settings. Typical examples are the Bengali village mosques that have thatched roofs and mud walls, somewhat similar to the original Masjid al-Nabawi (the Prophet's mosque), one of the earliest mosques in Madinah. Often, natural ponds are attached to these Bengali mosques. These serve as a place of *wudu* (ablution), which at the same time helps create an aesthetic effect on the landscape of the surroundings. Interestingly, the simple vernacular mosque architecture in the vast rural areas of Bengal bore, until very recently, a striking similarity with the hypostyle rectangular planning of the original Prophet's mosque in Madinah. In some remote rural areas where palm-groves are abundant such as in the Arabian desert or the villages of Northern Bengal, even palm-grove pillars can be seen supporting the roof of the prayer hall. *Sahn* (courtyard) is another legacy of the Prophet's mosque that can be seen in many village mosques in a great part of the rural area in Bengal. It is interesting to note that many of these architectural legacies of mosque design have been followed ages after ages merely traditionally, without any conscious effort to associate them with the original Prophet's mosque. Thus in its basic characteristics, there is a continuity in mosque architecture from the time of the Prophet to this day even in the far-flung region of Bengal. These simple praying structures spread all over the rural areas of Bengal, often serving as the nucleus of Bengali Muslim villages across the region. Most of the mosques in Bengali villages are still built in this traditional way often with the collective resources of the poor rural folk (and in most cases with the active support of religious laymen in the area). The vernacular architecture of the Muslim villages reminds us that the focus of Islamic architecture should not be solely on building; rather, it should be about people and their environment and nature.
Plate: An sixteenth century masjid from the reign of Sultan Bahadur Shah (962-68 /1555-61) in Kusumba, Manda, Rajshahi (ins. no. 260, dated 966/1558) representing a natural landscape of a typical medieval mosque of Bengal.

This simpler form of prayer place also contributed to the easy acceptance of Islam by rural folk. While most of the urban mosques were constructed under the patronage of sultans, members of the royal family, viziers, officials and wealthy men and women (e.g., the generous lady Boa Maloti of Purulia in Gaur [see ins. dated 941/1534-35]) of the cities, rural mosques came into existence either due to the common efforts of community members, or through the individual initiatives of religious personalities such as sufi shaykhs, ‘ulama’ and even petty religious laymen. These rural mosques helped in the formation of new settlements through clearing forests, particularly in the southern part of the Bengal Delta and eventually consolidation of Islam in the region. Quite often, these mosques received tax-free land grants. The revenue generated through the cultivation of these lands supported the maintenance of mosque as well as of the people attached to it, and particularly its caretakers. This particular institution of endowment, known as *madad-i-ma’ash*, provided material support to religious institutions, such as mosques, madrasas and khanqahs, as well as to those who were attached to them, such as imams, sufis, ‘ulama’ including the poor and
The Diffusion of Islam in the Eastern Frontier of South Asia

destitute commoners attending those institutions (see inscription at Bahram Saqqâ Shrine, dated 1015/1606-07; and Brarakatra inscription, dated 1055/1645). Sometimes these land grants were awarded directly to the pioneers who founded mosques in far remote areas which were inaccessible and previously uninhabited, such as forests and newly emerged lands in the delta caused by the changing patterns of the courses of rivers in Bengal. The District Collectorate Record Rooms of Bengal, particularly in Noakhali, Sylhet and Chittagong still preserve a number of Mughal land deeds (Sanad), mostly in Persian, that refer to the establishment of such mosques with endowment lands granted by local administrative authorities.

During the late Sultanate and Mughal periods, the institution of madad-i-ma‘ash played a key role in the massive growth of mosques everywhere in Bengal (see Nayabari ins., dated 1003/1595). Mosques thus played a very important role in new human settlements and the formation of agrarian societies in the sparsely-populated lower delta and the forest areas in eastern and southern Bengal as new villages started emerging around the newly founded mosques supported by madad-i-ma‘ash.

The Role of ‘Ulama’ and Madrasas in the Transmission of Knowledge

Madrasas, as recorded by a number of inscriptions, played a pivotal role in diffusing education and in creating a class of ‘ulama’ who spread Islamic education throughout the region (see map no. 3) together with sufis, most of whom were also great Islamic scholars. Madrasas were necessary for providing a large pool of educated professionals for fulfilling various social, administrative, official and government ranks. Consequently they left a positive influence in social, economic and cultural growth of the region. These institutions played in the past the same role that the modern educational institutions such as universities and colleges play in our modern period. The educated elite from madrasas assumed various different roles and responsibilities simultaneously in society. Thus, qadis would also act as teachers and imams, while ‘ulama’ would also be engaged in trade and commerce or in medical practice. Minhaj al-Dîn Siraj gives us some information about the establishment of madrasas in Bengal by the early Muslim rulers. Inscriptions offer information on the locations, dates of construction, names of patrons, and so on and help us identify centres of learning. In some cases, this information sheds light on links between the institutions, the transmission of ideas, student-teacher connections, and intellectual genealogies.
There were many famous madrasas, *madrasa-baris* and *dars-baris* (i.e., school; *dars* means lesson, *bari* in Bengali means house or building) throughout the country where learning flourished. Congregational mosques often served as centres of higher learning and masjids often functioned as *maktab*s, as they still do in many cases. An early inscription from Naohata from the reign of Balka Khan (626-28/1229-31) records such a mosque that also served as an academy for the area where scholarly subjects were discussed. Epigraphic texts suggest that the capital Gaur evolved as one of the earliest intellectual and cultural centres in the north. It had numerous mosques (more than 50 mosque inscriptions have been discovered in the area), madrasas and khanqahs as early as in the thirteenth century. Another early capital of the north, Hadrat Pandua (similarly rich in inscriptions), also became a prosperous cultural centre where many mosques and madrasas flourished. In eastern Bengal, Sonarga’ on (near Dhaka) became a famous educational centre after the arrival of a famous Hanbali scholar Shaykh Sharaf al-Din Abu Tawwama there in the middle of fourteenth century. Abu Tawwama’s fame attracted many students to Sonarga’on madrasa from different corners of the Islamic world. Shaykh Sharaf al-Din Yahya Maneri, who became a well-known sufi figure of the Subcontinent, also attended this
madrasa. Tandah, Rajmahal, Murshidabad and Jahangirnagar (today's Dhaka) became noted centres of learning in the sixteenth and seventeenth centuries. In northern Bengal, Ghoraghat, in the present district of Dinajpur, attracted many 'ulama' and students during the Mughal period. In southwest Bengal, Tribeni and Chota Pandua (in the present district of Hooghly) had a number of madrasas (the earliest one, Dar al-Khayrat, was established around 713/1313 according to an early inscription), during the Sultanate period. The town of Mangalkot (in the present district of Burdwan), not far from Tribeni, also earned fame as a great seat of learning, a reputation it maintained until the nineteenth century. In the southeast corner of Bengal, Chittagong evolved as the main educational centre where the Madrasa Muhsiniyyah in the nineteenth century and the Hathazari madrasa in the twentieth century played a crucial role in spreading Islamic education.

The cultural interaction of the Bengal sultanate often surpassed the political and geographical boundaries of South Asia. Many 'Ulama' and sufis came and settled in Bengal from Central Asia, Asia Minor and the Arab world. Some of the madrasahs and khanqahs that they established attracted students from other regions. Sultan A'am Shah had two madrasahs built during 813-14 (1410-11), one near Umm al-Hani gate (situated on al-Rukn al-Yamani or Yamani corner) of al-Haram al-Makki (the Grand Mosque) at Makkah, and the other near Bab al-Salam (the Gate of Peace) of the Prophet’s mosque at Madinah. He also endowed a large property to support these two institutions which were considered among the topmost seminaries in the region during that period. Renowned scholars, such as Shaykh Taqi al-Din al-Fasi (775-832/1374-1428), a pioneer in the field of epigraphy, taught Maliki school of fiqh (jurisprudence) at the al-Madrasa al-Sultaniyyah al-Ghiyathiyyah al-Bangaliyyah (named after its Bengal patron al-Sultan Ghiyath al-Din A'am Shah) in Makkah. Construction of this madrasa began in the month of Ramadan in 813 (1411) and was finally completed in 814 (1412). A number of scholars from the family of Shibli (who became famous through their education and scholarly activities in Makkah during fifteenth century) taught at this madrasah. A few prominent Makkani scholars attached to this madrasah, as mentioned by al-Fasi, were, Qadi Jamal al-Din Muhammad ibn ‘Abd Allah al-Qarshi (d. 817/1414), Shihab al-Din Abu 'l-Khayr Ahmad ibn Muhammad al-Saghani (d. 825/1422), Qadi Muhy al-Din ‘Abd al-Qadir al-Husayni al-Fasi (d. 827/1424) and Shaykh Abu 'l-Hasan ‘Ali ibn Ahmad al-Mardini al-Haskafi (d. 825/1422). The syllabus of this madrasah covered fiqh of the four famous schools of Islamic shar¬‘a, which, in a way, indicates the liberal policy and religious tolerance that prevailed in Bengal. Sultan Jalal al-Din (r.1414-33) also sent generous endowments to
Makkah and Madinah to establish two madrasahs there which were as well known as al-Madrasah al-Bangaliyyah over time.

Bengali students often travelled for their religious training in famous centres of learning in Jaunpur and Delhi, and sometimes as far away as Khurasan, Central Asia, and the Arab world. The Dar al-‘Ulum in Deoband, Mānāhir al-‘Ulum in Saharanpur, Madrasa Rahmaniyya in Delhi and Nadwat al-‘Ulama’ in Lucknow attracted many students from Bengal during the colonial period and afterwards. Many of the ‘ulama’, who graduated from these madrasas, returned to establish their own madrasas in Bengal, a tradition that still continues.

Most of these madrasas followed a model known as al-Madrasa al-Ni‘amiyya that started appearing first in Baghdad, Nishapur and many other important cities in Khurasan under the patronage of Ni‘am al-Mulk, the famous intellectual Abbasside vizier, in eleventh century. Soon afterward, these institutions spread in the central and the eastern parts of the Islamic world, everywhere from Anatolia in the West to Bengal in the East. In South Asia, the curriculum was known as Dars-i-Ni‘am (after Mulla Ni‘am al-Din of Aurangzeb’s time) in which a special focus was given on the Hanafi fiqh. At times, these institutions contributed significantly in promoting al-‘ulum al-naqliyyah (namely, classical religious scholarship) as well as al-‘ulum al-aqliyyah (rational knowledge or sciences).

After the first war of independence in 1857, a vast majority of ‘ulama’ turned their attention to Islamic education which they considered an alternative to armed struggle against colonial rule or jihad. This process to arm young generation with educational power was itself a sort of lesser jihad, albeit a passive one, for it neglected modern sciences (al-‘ulum al-hadithah) and concentrated solely on classical religious scholarship (al-‘ulum al-naqliyyah). In doing so, the institution of madrasa, that once contributed greatly in the growth of intellectual and scientific advancement in the Islamic world, adopted a closed door policy reducing its sphere of academic exercise to the preservation of some selected classical Islamic scholarships. Undoubtedly, changing political scenario led these ‘ulama’ to follow this passive path as participation of many of them in jihad movement had made the colonial power suspicious about their activities, and madrasa institutions specially came under scrutiny.

Most of the pre-colonial madrasas during Muslim rule were supported by endowments, until the East India Company passed orders in 1828 to acquire all awqaf (endowments) of madrasa depriving these institutions completely from their main source of income. The final blow came during the time of Lord Harding when he passed a law in 1844 forbidding graduates of Persian and Arabic (non-governmental Islamic) madrasas to be given
employment in government. Even the official jobs of qadi with the
government, exclusively retained for the madrasa graduates previously, were
now offered to only those formally trained in British law.
Still, the colonial power could not neglect completely the local customs, law
and culture as they needed to understand them in order to run their
administration smoothly. To find a solution, they embarked on introducing
new curriculum and institution which would accommodate both classical and
modern education effectively serving the need of the British administration
without upsetting the traditional values of local communities abruptly. Thus,
towards the end of eighteenth century, a new curriculum was introduced
under government patronage, where secular subjects such as Bengali and
English language and literature were added to theology. Calcutta madrasa was
established in 1781 during the time of Governor-General Warren Hastings
(1773-84). Later on, it became famous as Calcutta ‘Alia madrasa, which still
functions. Later on, all the government sponsored madrasas which taught this
new curriculum became known as ‘a liya madrasas (literally: higher
institutes). Though initially they failed to earn popularity from the mainstream
rural Muslim population as they received support from the British raj, slowly
and gradually ‘a liya madrasas spread all over Bengal. The institution has
further spread in the region after independence as thousands of students
graduate from ‘a liya madrasas every year.

16  Persian MS., Asiatic Society of Bengal, Kolkata, no. P.C.C. – 1, folios 16 & 17. This particular manuscript seems to be the first and earliest Persian collection of the Asiatic Society of Bengal which was widely used for many subsequent studies and editions of Tabaqat-i-Nasiri.
18  A place by the name of Sakanat appears in a map in an early European work, His Pilgrims, by Samuel Purcha.
20 It is a compound Persian name meaning new village (naw means new, and deh or diyah means village or villages [particularly in the low and marshy land]). The name itself bears a great sociological implication as it symbolizes the new settlements that started taking place in this hinterland right after Bakhtiyar’s campaign. The more accepted form of spelling in Bengal -- Nawdiya (Navadipa in Sanskrit) -- can also be interpreted as new lamp which is quite interesting as it symbolizes the advent of light (Islam) in the Bengal frontier with its conquest by Muslim forces. There were a number of villages that once bore the name of Nawdah in the districts of Malda, Chapai Nawabganj and Murshidabad, such as the present mauja (village) of Uttar ‘Umarpur, on the south-east of Gaur (or more precisely the present village of Mahdipur), about one kilometer west of Kotwali Darwaza. But it is the archaeological site of Nawdapa, near Rohanpur railway station in Chapai Nawabganj district which was most likely the capital of Lakhshman Sen conquered by Bakhtiyar. The site consists of a huge mound full of old baked bricks of the type used in the ancient monuments in Gaur and the surrounding area. Local traditions still identify the ruins as Lakhkhun Sener Bari (Lakhshman Sen Palace) which had a backdoor (for emergency escape, known in Bengali as Khirki) opening to a jetty on Mahanada river. Another nearby ruins of a monument is locally known as Nawda Burj (sometimes also as Shar Burj) apparently a victory tower built by Bakhtiyar after his sudden conquest of the capital.

21 From it, the land on the both sides of the river Padma (Ganges) in Chapai Nawabganj, Mushidabad and Malda districts became gradually known as Diyar, and the Muslim population of the area as Diyar, and occasionally as Shərshabadiya (author’s own clan) referring to their ancestral link to Afghan soldiers of Shər Shah Sur in the region. It may possibly have been also as a reference to the Muslim inhabitants of the area known previously as Shər Shah Abad Parganah. Their Bengali dialect is heavily influenced by Persian (e.g., the Persian adjective khasta [tired] in Bengali verb form to render the meaning of getting tired).

23 Some of the royal titles in the early Islamic inscriptions, such as maladh al-warā (shelter of mankind) Rukn al-Dana (Support of the commoners) in the madrasa inscription at Zafar Khan Masjid in Tribeni dated 698/1298 (no, 12), indicate this trend.

28 *JASB* 13 (1844): 36.

29 Muhammad Enamul Haq, *Purbo Pakistane Islam* (Dhaka, 1948), 17; M. A. Rahim points out, "Reading of term *Thu-ra-tan* as *Sultan* cannot be dismissed as fantastic." He thinks that it is reasonable to suggest that the term *surtan* is an Arakanese corruption of *sultan* since such a word did not exist in Arakanese or Buddhist tradition. The *sulta n* was the “chief of the influential community of Arab merchants in the Chittagong locality, not the ruler of a kingdom covering the Chittagong and Noakhali districts, as it is supposed”; see *Social and Cultural History of Bengal*, vol. 1, 1201-1576 C.E. (Karachi, 1963), 44.

33 This date can be confirmed based on numerous beautiful gold and silver coins that were superbly struck in the mints of Gaur and Delhi in the consecutive years of Bakhtiyar’s victory, some of which are now preserved in Delhi Museum, the British Museum, and the Smithsonian Institution. Almost all of these coins depict a horseman charging at full gallop holding a mace in his hand, symbolizing the powerful cavalry of the Muslims that helped them conquer this land. See Parameshwari Lal Gupta, “The Date of Bakhtiyar Khilji's Occupation of Gauda,” *Journal of the Varendra Research Museum* 4 (1975-76): 29-34; G. S. Farid, “Hitherto Unknown Silver Tankah of Sultan Alauddin Ali Mardan Khilji, 607-610 A.H.” *Journal of the Asiatic Society* 18, nos. 1-4 (1976): 104-6; John Deyell, *Living without Silver: The Monetary History of Early Medieval North India* (Delhi: Oxford University Press, 1990), 364-367, coin no. 298.

36 It was known as Tishu Lamba (the seat of Luma) situated roughly between 20.7° latitude (north) and 89.2° longitude (east), about 80 miles from Rangpur.
Mech and various other tribal people still inhabit in the northern area of Kochbihar (about 25 mile from Alipur), West Bengal and occasionally support local insurgent groups aiming to regain old political identity, such as Kamrup and Kamta lands, that survived long side by side with Bengal sultanate.

This influence can be felt more strongly in certain local Bengali dialects used by the rural Muslims of North Bengal, such as the Shørshabadi clan (to which the author himself belong), in and around early Muslim capitals such as Gaur and Pandua. On the other hand, Arabic linguistic influence can be observed more in the Bengali dialects of the Chittagong divisions of southern Bengal.

For instance, see Raw¥a Inscription in Barahdari dated 663/1268 (no. 7) and Raw¥a Inscription in Mahasthangarh dated 700/1300 (no. 13).

Mu加快发展 Balkhi (d. 1400), for instance, used this port with the permission of Sultan Ghiyath al-Din Aʿam Shah (r. 1389-1410) to embark on a trip from Chittagong to Makkah; see Mu加快发展 Shams Balkhi, *Maktuba t-i-Mu加快发展 Shams Balkh*, Khuda Bakhsh Oriental Public Library, Patna, Persian MS., Acc. no. 1859, Letter 148. See also S. H. Askari, *Maktub and Malfuz Literature as a Source of Socio-Political History* (Patna: Khuda Bakhsh Oriental Public Library, 1981), 16.

Descendants of the Afghans and other immigrants from Khurasan and Central Asia gradually assimilated with the local population (e.g., through marriages) and hardly maintained their separate identity in the long run. However, there are still some traditional families which have retained their ancestral family names (i.e., surnames such as Khan, Paththan, Yusufzai, Lohanii, Afridi and Panni) or have been able to preserve their family trees to some extent indicating their Afghan or Central Asian origin. To cite a typical example, we may mention here a family line (author’s own ancestors) in the village of Gopalganj near Sujnipara railway station in Murshidabad district which claims its ancestry from Khurasan region that originally bore the surname of Khan at the beginning though the surname was dropped somewhere down the line. The family tree runs as follows: Ahmad Zaki> ibn Yusuf Siddiq (the author)> ibn Mujib al-Rahma> ibn ‘Abd al-Ghani> ibn Ayyub Husayn> ibn Hajji Shahadat Mondol> ibn Bula gi Mondol> ibn Niza m al-Din Mondol> ibn ‘Abd al-Karim Mondol> ibn Haydar ‘Ali Khan. Another branch of this family living in the village of Ambhua near Rajgram railway station in the district of
Birbhum records its family tree as following: Kulthum Bibi (author’s grandmother) > bint Mawlana ‘Abd al-Rahim > ibn Hajji Qalandar Husayn > ibn Shihab al-Din Khan > ibn La’al Muhammad Khan > ibn Shahar Khan Peshawari. A family line of a female from the same clan in the village of Ambhua is: Majida Khatun (mother of Kulthum Bibi) > bint Taplu Kha n > ibn Samr al-Din Khan > ibn Damir al-Din Khan > ibn Nakbir Khan Paththan. All these three families pioneered a religious movement, known as Ahl al-Hadith, in their respective localities, and supported Jihad movement against colonial rule in one way or other.

“Register of sanads,” Sylhet District Collectorate Record Room, nos. 17:75, 243, 18; nos. 94, 154, 158, 279, 19; nos. 334, 618, 619, 20; nos. 851, 853, 959; nos. 397, 400.

The name Yaghistan (lit., “the land of the rebels” ya ghi-“rebel”, ista n “region”) referred to different sanctuaries used by Mujahid for Muslim freedom fighters against the British authorities in the 19th and early 20th centuries, in the various independent tribal areas, mainly inhabited by the Pakhtuns, in the hinterland of what became the North West Frontier Province (NWFP) of British India such as Mohmand Agency, Bajur Agency, Dir, Swat (particularly Bunair), Kohistan (particularly what is know as district of Hazara these days) and Chamarqand (extended both in the Kunar province of Afghanistan and Bajor agency in NWFP). A popular term rather than a formally recognized one, the name was in use long before the British colonial period, historically referred to as Ya ghista n al-Qadim, and sometimes as Riya sat-ha ‘i-Ya ghista n.

Though Ya ghista n comprised mainly mountainous terrain, the Mujahidun carefully selected their centers around fertile valleys, lakes and rivers in order to be self-reliant as regards agricultural products and to find hideouts to support their guerilla warfare. With the rise of Muslim resistance, firstly to the Sikh rule in Punjab and Kashmir, and then to the gradual British colonial expansion in South Asia to the cost of Muslim rule there, the Mujahidun from different regions started gathering in Yaghistan. In spite of their initial success under the charismatic leadership of Sayyid Ahmad Barailiwi, the movement had a tremendous setback in Balakot on May 6, 1831, in which Ahmad Barailiwi and most of his companions were killed by the Sikhs. During the first Afghan-British war (1839-42), the Mujahidun leader Mawlawi Nasir al-Din sided with Dost Muhammad by sending a contingent of fighters from Yaghista n to Kabul and Gaznah. After him, the leadership of the Mujahidun gradually passed over firstly to Mawla na Wila yat ‘Ali (d. 1852), and then to his younger brother Mawlana ‘Inayat ‘Ali (1858). Through an effective network which extended as far as Bengal, the Mujahidun regularly received fresh recruits, money and moral supports in their frequently changing centers in Yaghista n such as Sita na, Mulka and Ambila. The Yaghista ni Mujahidun always kept close contact with their supporters, and at times, they used secret
messages in code. Though most of the jihad centers in Yaghista n were attacked and destroyed by the colonial army during the second half of the 19th century, the resistance of the Mujahidun continued under such leaderships as Najm al-Din Hadda Mulla (d. 1902) and Sa’d Allah Khan Mulla Mastan (branded as Mad Mulla by his opponents; d. 1916).

In 1902, the Mujahidun leader ‘Abd al-Kar¬m ibn Wilayat ‘Ali chose Asmast in Bunair near Swat valley as his headquarters. During the First World War, a rival center slowly grew up and prospered in the Afghan part of Chamarqand, where leaders such as Mawla na Muhammad ‘Al¬ Qasur¬ (see his book Mushahda t-i-Kabul wa Yagista n, Lahore: Idara Ma’ra rif-i-Islam¬, 1986), Mawlawi ‘Abd al-Karim Qannuji (d. 1922), Mawlawi Muhammad Bashir (d. 1934), Ha jji Tarangza’i (d. 1937) and Mawlawi Fadl ‘Ilahi Wazirabdari (d. 1951; see his book Kawa’if-i-Yaghista n, Gujranwala, 1981) led a number of skirmishes against the colonial army in Shabqadar, Chakdarah, Mohmand Agency and many other places in NWFP. At times, the Yaghistani Mujahidun also developed alliances with a number of other anti-colonial movements such as Hizb-Allah, Junud Rabba niyyah, Hukumat-i-Muwaqqata-i-Hind and Jam’iyyat al-Ansar. In order to curtail revolutionary influences of the Mujahidun in the other regions, entry into Yaghista n was regulated by permits during the British period, a system abolished only in 1959.

With the independence of Pakistan in 1947, Yaghista n gradually became part of the historical past. The original Jihad movement also lost its impetus, although the independent character of certain Pakhtun tribes (e.g., the Afridis) and their systems (i.e., Jirgah) in these areas, are still recognized by Pakistan. Many tribal Mujahidun and the activists of the Jihad movement took part in the war of independence of the Kashmiri Muslims against India in 1948 and thereafter, and subsequently in the popular Afghan uprising against the Soviet Russian supported communist regime in Kabul in the 1980s. The same region also served lately as sanctuaries for the Afghan Talib and the Arab al-Qa’ida movements (led by Mulla ‘Umar and ‘Usamah ibn La din). For details, see Encyclopaedia of Islam 2nd. ed, s.v. "Yagistan;" Mawlana ‘Ubayd Allah Sindh’s, Sarguzasht-i-Kabul (Islamabad: Qawmi Idara Bara’i Tahqiq wa Thaqfah, 1980); Muhammad Khawas Kha n, Ru’idad-i-Mujahidin-i-Hind, Lahore, 1983; Muin-ud-Din Ahmad Khan, Selections from Bengal Government Records on Wahhabi Trials, Dacca, 1961; Sayyid Muhammad ‘Ali, Makhzan-i-Ahmad, Agrah, 1881; Qeyamuddin Ahmad, The Wahhabi Movement in India, New Delhi: Firma K. 47 Notes on Indian History (Moscow, n.d.), p. 152.
48 Encyclopaedia of Islam 2nd. ed. s.v. "Titimir."
Ironically religious movements, such as Ta’ayyun¬ of Mawla na Kara mat ‘Ali, (and more particularly the Qadiyani [popularly known as Mirza’i] sect of the Punjab in early twentieth century) that did not advocate jihad, were not only tolerated by colonial power, but were often encouraged as well as favoured.

For example, Ja mi’ Masjid inscription (no. 9) from Lakhisarai dated 697 (1297) refers to these activities by the phrase *za da khayruhu* (May his benevolence increase).

The influence of mosques is referred to in the phrase *a’la athar al-masjid* (lit., who has exalted the influence of the masjid) in ‘Ala’ al-Haq Masjid inscription dated 743/1342 (ins. no. 19).

The institution of *madad-i-ma’ash* still exists in Afghanistan, Iran and Central Asia.

Evet since, Umm al-Hani gate of the Grand Mosque at Makkah became the gathering place of Bengali pilgrims during the daily prayers, a tradition that still exists.
