Q.2. Answer the following questions:

(3x10=30)

- 1) Write a program that calculates the **area of a sector of a circle**. The program should take the **radius of the circle ( $r$ )** and the **central angle ( $\theta$ ) in degrees** as input from the user and display the calculated area.

The formula for the **area of a sector** is:

$$Area = \frac{\theta}{360} \pi r^2$$

where  $r$  is the **radius** of the circle,  $\theta$  is the central angle in degrees, and  $\pi$  (**pi**) is approximately **3.14159**.

- 2) Write a function named **numberToTemperatureRange** that takes an integer representing a **temperature** in Celsius and returns the corresponding **temperature range**: "Cold" (below 0°C), "Cool" (0-15°C), "Warm" (16-25°C), or "Hot" (above 25°C). If the input is below -100°C or above 100°C, the function should return "Invalid temperature".

For example:

- For input **-5**, the function should return **"Cold"**.
- For input **40**, the function should return **"Hot"**.
- For input **120**, the function should return **"Invalid temperature"**.

- 3) Write a function named **mirrorOperators** that takes the following arguments:

1. An **array of characters** (representing mathematical operators).
2. An **integer** representing the number of characters in the array.

The function must **reverse the order** of the values in the array (without creating a new array).

For example, if the array passed to the function contains the following values:

Index:	0	1	2	3	4
Values:	+	-	/	*	%

After the function executes, the array should be modified to look like this:

Index:	0	1	2	3	4
Values:	%	*	/	-	+

The function **should not return any value**.

**Q.4. Read the following passage and respond to the questions given at the end of the passage.**

**10+5=15**

Many families now face the problem of coping with elderly members. Inevitably these demands will be met with mixed feelings. An old person may seem a nuisance if he is living with a family in a relatively small house. Equally, the old person may feel deep regret on the loss of independence that frailty brings.

The popular view is that modern families no longer offer the dependent elderly the care that they once did. However, some studies show that families give immense amounts of assistance and support to elderly relatives. Much of the burden of this care falls on the wife. Nevertheless, there are two complicating issues. First, many wives now return to work when their children go to school. Their income is often essential to the family economy. In this situation can the family afford to help an elderly relative? Second there are many old people with no relatives: perhaps a third of old people have no family members who can help them. In either of these two cases, the burden of care for the elderly may have to fall on society.

- 1) When an elderly person can become a nuisance?
- 2) How much care is provided to elderly persons now?
- 3) How a wife has to bear the burden of an elderly person?
- 4) Who will support the elderly persons who have no family?
- 5) When an old man experiences regret?

2. What are Skimming and Scanning, and how do they contribute to developing reading skills?
3. Read the following passage carefully and answer the following questions.

For children, there is no greater instrument of education than the conversation they hear at home. It is unjust to them when the only topics discussed in their presence are the trifles of dress, the gossip of the neighborhood, the household cares that weigh heavily on their parents, or the follies and vanities of the world, which their innocent minds can barely comprehend. Children are naturally imitative, and much of their character is shaped by their parents.

If there is no life or joy in a home, the children are likely to grow up dull and uninteresting. If they are never exposed to rational discussions, they will not learn to think critically or reason effectively. When the wonders of the world around them are ignored, they become disinterested, inattentive, and unobservant. This home education, acquired unconsciously, is as crucial as the formal education provided by schools. It is our responsibility to nourish their minds just as we provide for their bodies. Children do not live by bread alone, but by every meaningful word spoken in their hearing.

**\*Questions:\***

- i. What sort of conversation does the author think is bad for children?
- ii. Why does the author think that children may become dull and stupid?
- iii. What conversation helps children to think and reason?
- iv. What should parents do to prevent children becoming "without interests, listless and unobservant"?

If the input is outside the range of 1 to 10, the function should return an **appropriate message**, such as "Invalid number."

For example:

- For input **1**, the function should return **"I"**.
- For input **5**, the function should return **"V"**.
- For input **11**, the function should return **"Invalid number"**.

- 3) Write a function named **flipSentence** that takes the following arguments:

- An **array of characters** representing a sentence (including spaces).
- An **integer** representing the number of characters in the array.

The function must **reverse the order** of the characters in the array (without creating a new array).

For example, if the array passed to the function contains the following values:

Index:	0	1	2	3	4	5	6	7
Values:	H	e	l	l	o		H	i

After the function executes, the array should be modified to look like this:

Index:	0	1	2	3	4	5	6	7
Values:	i	H		o	l	l	e	H

The function **should not return any value**.

**Q.4.(a)** A factory produces light bulbs, and each bulb has a probability of 0.2 of being defective. A quality inspector randomly selects a sample of 5 bulbs each day and records the number of defective bulbs. The data collected over 100 days is summarized below:

No. of Defective Bulbs (x)	0	1	2	3	4	5
Frequency (Observed)	30	35	20	10	4	1

Fit a binomial distribution to the above data.

(b). A researcher wants to study the effect of two factors—Fertilizer Type and Irrigation Method—on crop yield (kg/plot). There are 3 types of fertilizers; A, B, and C  
4 irrigation methods: Drip, Sprinkler, Furrow, Flood.

The data is shown below:

	Drip	Sprinkler	Furrow	Flood
Fertilizer A	50	55	53	52
Fertilizer B	58	60	56	54
Fertilizer C	62	64	63	61

Use Two-Way ANOVA to test whether:

There is a significant effect of Fertilizer Type on crop yield.

There is a significant effect of Irrigation Method on crop yield.
