*Dr. Ali Raza Tahir*

**Abstract.** Some orientalists are of the opinion that there is no creativity and geniuses in Muslim thought. All the work of Muslim philosophers is not more than the commentary and explanation of Greek Masters i.e. Plato and Aristotle. The discussions of Muslim theologians are vague, ambiguous and meaningless. Muslim Mysticism is a hotchpotch of Christianity, Judaism, Buddhism and Neo Platonism etc. On the other hand some orientalists say that Muslim thinkers contributed the human kind in all walks of life. They admitted that the Muslims were the pioneers of all natural sciences. The contribution of Muslim thinkers in Medicine is remarkable. They acknowledged the role of Muslim intellectuals in the renaissance of the west. What is the fact in this controversy? We have tried to discover it in coming lines.

**Key Words:** Orientalists, Philosophy, Natural Sciences, Christianity, Islam, Renaissance
